Streaming Triggers

01

Unspecified

micro-batches will be generated as soon as the previous micro-batch has completed processing

```
df.writeStream \
  .format("delta") \
  .option("checkpointLocation", "/chkpt/dir") \
  .toTable("table name")
```

ASAP - Seconds

02

Fixed interval

micro-batches will be kicked off at user-specified intervals

```
df.writeStream \
  .format("delta") \
  .option("checkpointLocation", "/chkpt/dir") \
  .trigger(processingTime='2 seconds') \
  .toTable("table name")
```

Collect and Process - Minutes

03

Available-now

one-time micro-batch trigger to process all the available data and then stop on its own

```
df.writeStream \
  .format("delta") \
  .option("checkpointLocation", "/chkpt/dir") \
  .trigger(availableNow=True) \
  .toTable("table name")
```

Incremental Batch - Hours
