Usage Information + Support

Ratings + Reviews

Unity Catalog provides unified governance for all data and AI assets in your Lakehouse.

Unity Catalog can be configured to use an Azure managed identity to access storage containers on behalf of Unity Catalog users. Managed identities provide an identity for applications to use when they connect to resources that support Microsoft Entra ID authentication. You can use managed identities in Unity Catalog to support two primary use cases:-

- As an identity to connect to the metastore's storage accounts (where managed tables are stored).
- As an identity to connect to other external storage accounts (either for file-based access or for external tables).

Configuring Unity Catalog with a managed identity has the following benefits over configuring Unity Catalog with a service principal:-

- You can connect to an Azure Data Lake Storage Gen2 account that is protected by a storage firewall.
- Managed identities do not require you to maintain credentials or rotate secrets.

## Create an Access Connector for Azure Databricks

Basics Tags Managed Identity Review + create

The Azure Databricks Access Connector lets you connect managed identities to an Azure Databricks account for the purpose of accessing data registered in Unity Catalog.

## Add role assignment

[Role](#)[Members](#)[Conditions \(optional\)](#)[Review + assign](#)

A role definition is a collection of permissions. You can use the built-in roles or you can create your own custom roles. [Learn more](#)

Assignment type

[Job function roles](#)[Privileged administrator roles](#)

Grant access to Azure resources based on job function, such as the ability to create virtual machines.
